

Implementing Blaise 5 in a production environment

Paul Segel, Mangal Subramanian, Ray Snowden, Richard Frey, and Mike Florczyk; Westat, Inc.

Implementing multimode data collections involving CATI, web and mobile requires planning and management support. As part of our planning for Blaise 5 implementation, Westat instantiated Blaise 5 software on multiple server configurations and conducted some limited stress testing. This paper discusses our approach to testing Blaise 5 installation and considerations related to case and data management for multimode surveys in this environment.
