

The Application of CFPS EHC

Shuai Sun, Peking University

EHC (Event History Calendar) program using mainstream object-oriented programming language that applies to adult questionnaire of CFPS(China Family Panel Studies).This program helps respondents recall questionnaire answers and interviewers input information conveniently through the visualization and form.In addition, it can also check the reasonableness of the data by software check, hard check, and global logic checks.The main purpose of the program is to improve the efficiency and quality of data collection.

CFPS EHC has its own independent questionnaire system,it contains issues and the logical jump using dynamic configuration form. After the information is entered, the data of EHC will be written in the bdb to ensure consistency of Blaise data and EHC questionnaire data.
